KPFK 90.7FM

AN OVERVIEW FOR PACIFICA

KPFK's whole archive, on the web, on every screen

The KPFK Archive website lets anyone browse every program on KPFK's schedule, play any episode, listen live, search everything, and read along with the transcript — on a phone, a tablet or a computer. Nothing to install, no account, no sign-in.

podcasts.kpfk.org

106 programs

And about 1,190 episodes today — everything on KPFK's published schedule, plus its podcasts.

Read along

A title, a summary and a full transcript for nearly every talk episode, in English and Spanish.

No personal data

No accounts, no tracking, no advertising. The station sees counts — never who.

Why it matters

KPFK's programs keep their value long after they air. The website gives every listener — and anyone a listener shares a link with — a way back to them: catch up on a show they missed, find the moment someone said something, read along, or tune in live.

It runs on its own: it reads Pacifica's archive feeds directly, so every program that airs and is archived appears on its own, with no extra work for station staff. The same archive powers the KPFK Podcasts app for iPhone, iPad and Android.

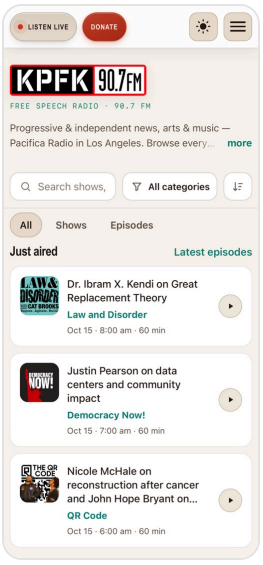

FOR LISTENERS

What the website does

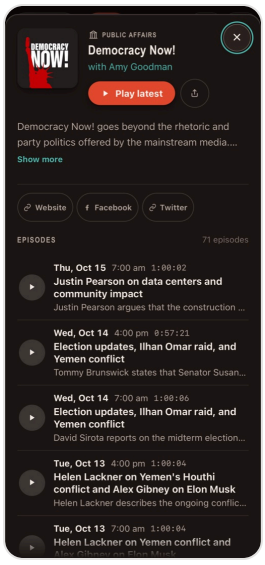

Every program, one tap away

The home page shows what just aired and every program with its artwork, host and latest broadcast. Listeners can sort A to Z, by what aired most recently, or by category — News, Public Affairs, Arts & Culture, Health, Music, En Español.

Each program has its own page: description, links, and every episode, newest first, with the episode's title and summary.

HOME — LIGHT

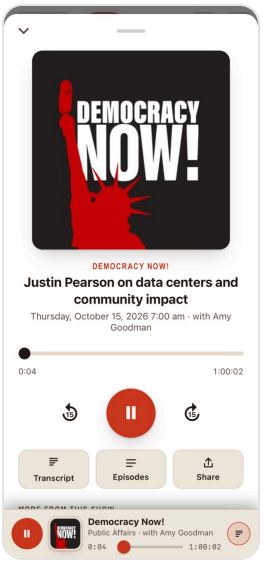

A PROGRAM — DARK

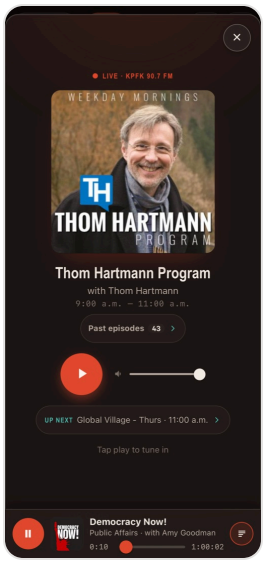

The player, and KPFK live

One tap plays an episode; the player stays at the bottom of the screen while listeners keep browsing, and remembers where each listener stopped.

Listen live shows what is on air now, the host, the time slot and what comes next — with a link to the program's past episodes.

NOW PLAYING — LIGHT

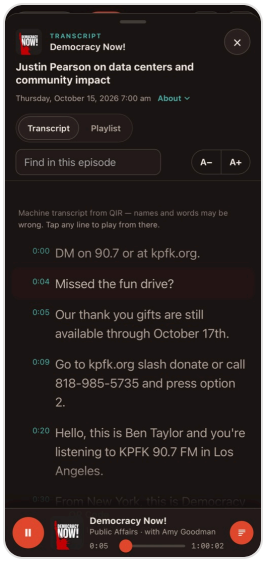

LISTEN LIVE — DARK

Listen along — the transcript, as it plays

The transcript scrolls with the broadcast, the line being spoken highlighted. Listeners tap any line to jump there, search within the episode, and make the text larger or smaller.

For music programs, **Playlist** shows the station's logged songs the same way.

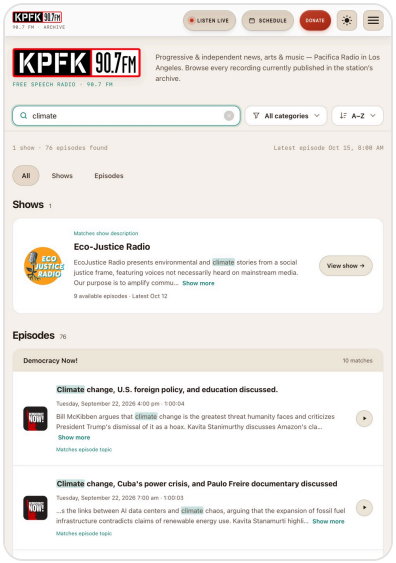

Valuable for people who are deaf or hard of hearing, for following a fast conversation, and for finding a quote.

TRANSCRIPT — DARK

Search everything

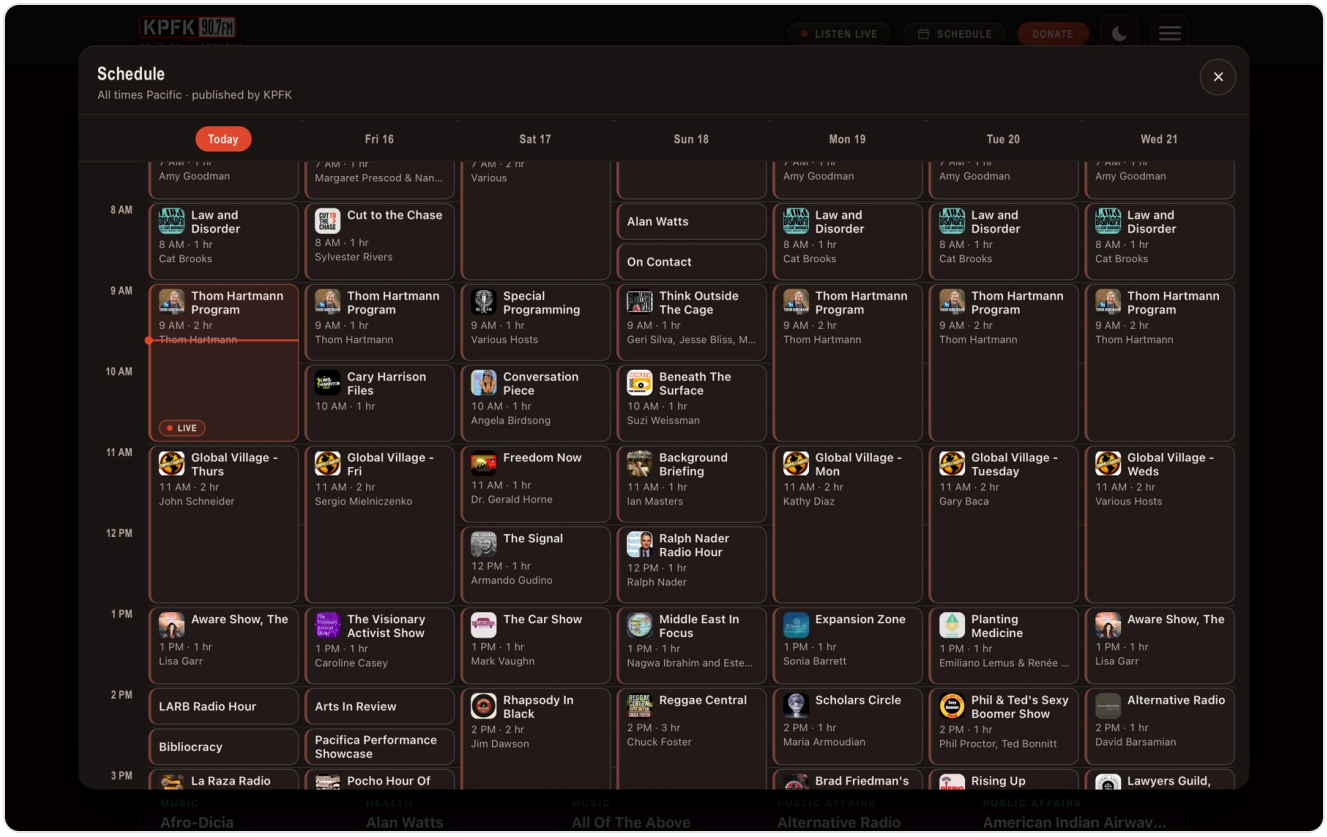

One search covers program names, hosts, episode titles and summaries. Searching "climate" finds the program that covers it and 76 episodes that discuss it, grouped by program, with the matching words highlighted.

SEARCH ON A TABLET — LIGHT

The schedule, and a week at a glance

The schedule shows the next seven days as KPFK publishes them, with what is live right now marked. On a computer, **Grid** lays the whole week out side by side, like a printed program guide.

THE WEEK GRID ON A COMPUTER — DARK

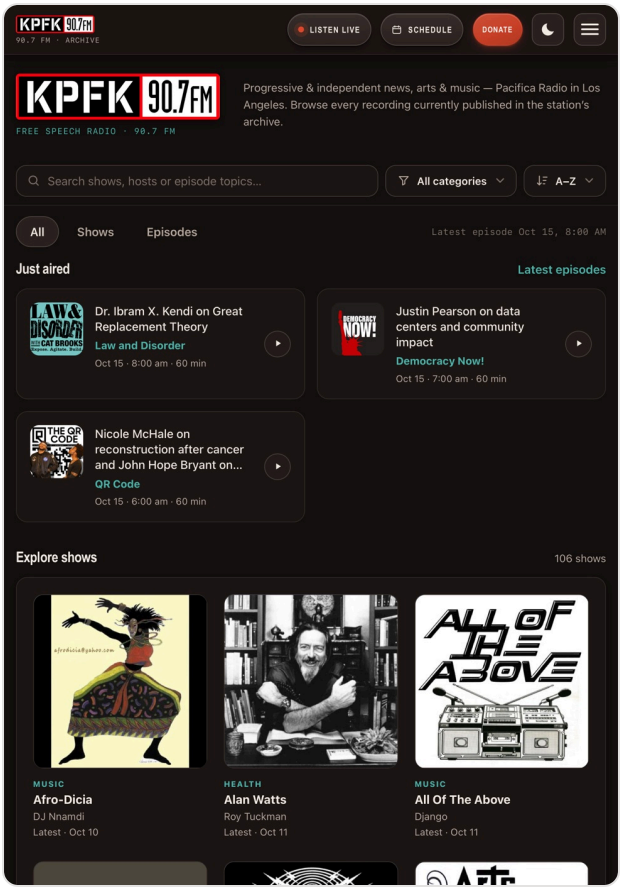

Sharing

Every episode has a link. Shared in Messages, WhatsApp, Facebook or Slack, it shows a card with the program's artwork and the episode's own title — and it opens on this website for anyone, app or not.

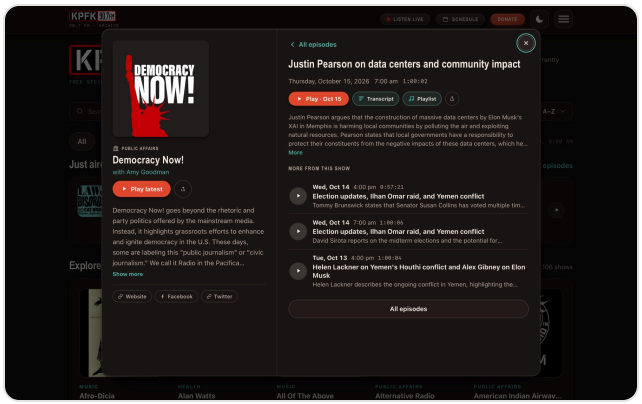

ONE WEBSITE

Made for every screen

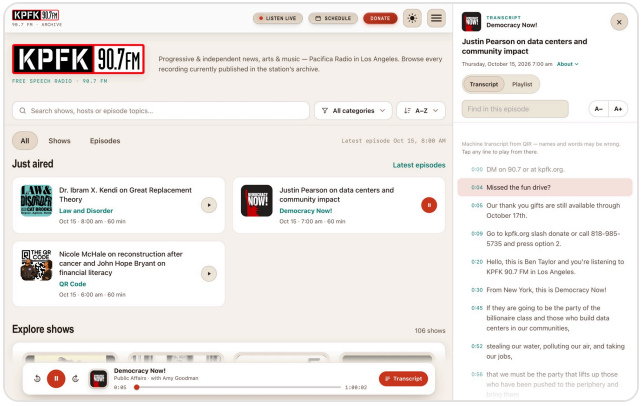

The same address works everywhere and arranges itself for the screen in hand. On a phone, the player, program pages and transcript slide up from the bottom; on a computer, an episode opens as a two-column card and the transcript sits beside the page while listeners keep browsing. Light and dark follow the device's own setting.

TABLET — HOME, DARK

COMPUTER — AN EPISODE, DARK

FOR STATION STAFF

The studio: what the station sees

Staff sign in at **podcasts.kpfk.org/studio** with the station's studio password. It is a private dashboard — listeners never see it, and nothing in it can change what is on the air.

Sign in

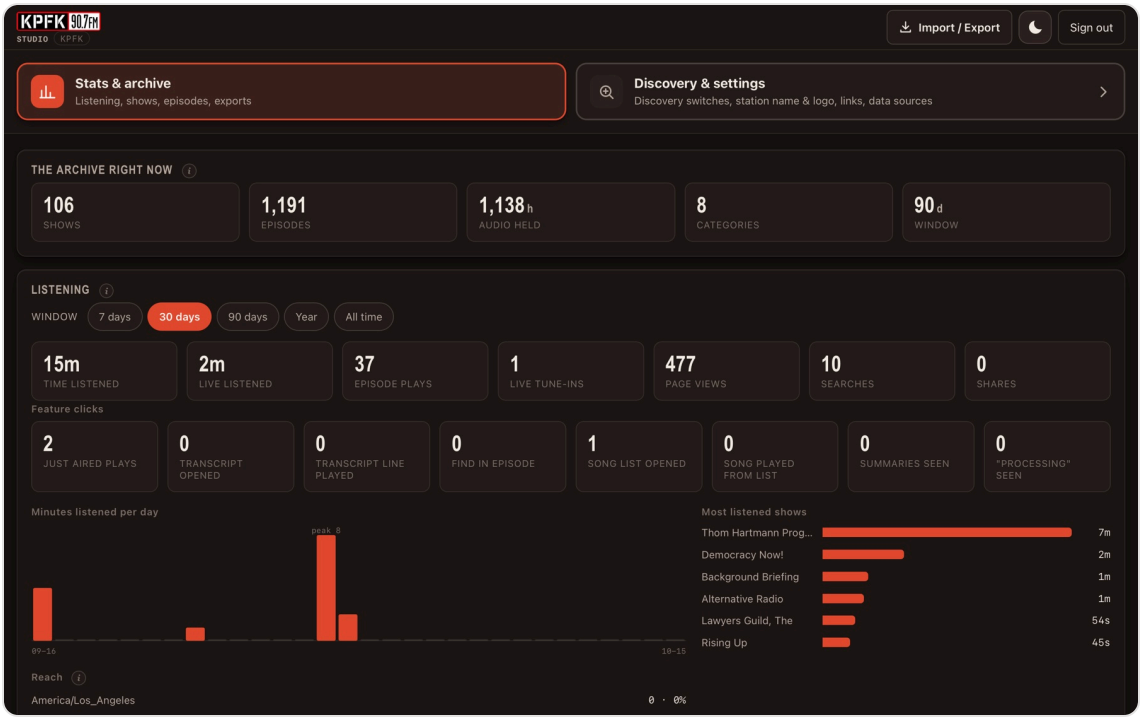

One password, set by the station on its server. Without it the studio does not exist; with it, staff get the dashboard, the reports and the station's settings.

STUDIO SIGN-IN — LIGHT

Listening and the archive, at a glance

The archive right now — programs, episodes, hours of audio. Then listening for the last 7, 30 or 90 days, the year or all time: time listened, live listening, episode plays, page views and searches; minutes listened per day; the most listened programs; and how often listeners open transcripts and playlists. Further down: which programs have the thinnest archive, and problems in Pacifica's feed (failed recordings, wrong lengths) flagged for staff.

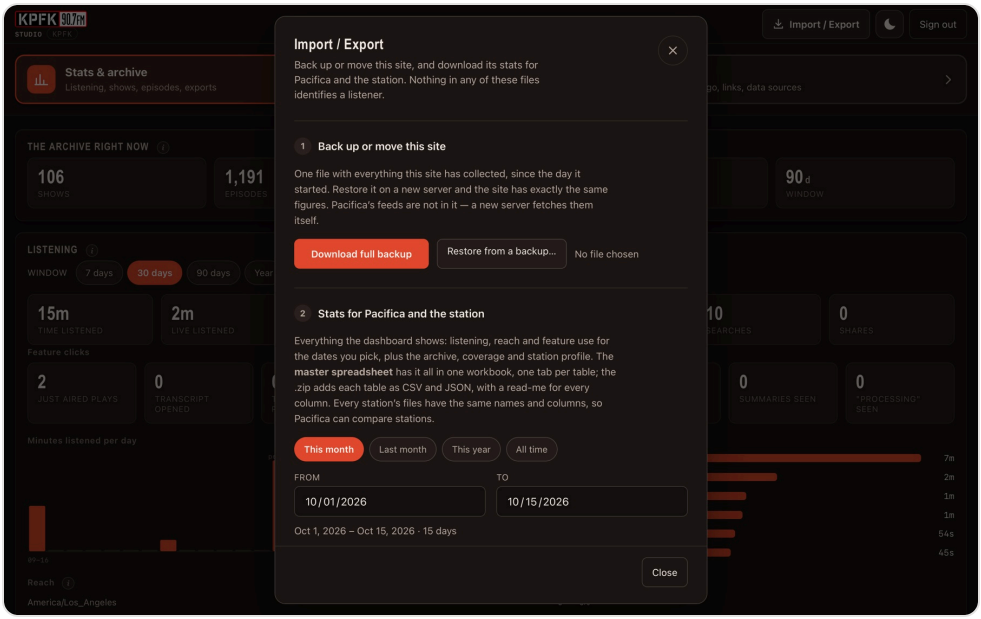

THE DASHBOARD — DARK (EXAMPLE FIGURES FROM A TEST COPY)

Import / Export — for Pacifica, and for moving the site

Back up or move this site: one file holds everything the site has collected since the day it started. Restored on a new server, the new site shows exactly the same figures.

Stats for Pacifica and the station: pick a span — this month, last month, this year, all time or any dates — and download a master spreadsheet (one tab per table) or a .zip of CSV and JSON files with a read-me for every column. Every station's files use the same names and columns, so Pacifica can add stations together and compare them. As the dialog itself says: nothing in any of these files identifies a listener.

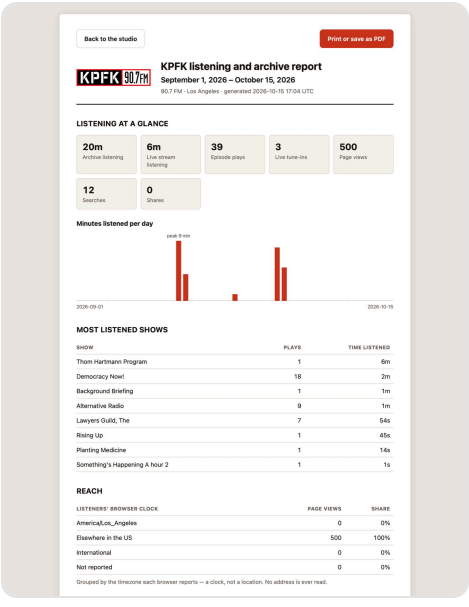

IMPORT / EXPORT — DARK

A printable report

For a board meeting or a funder: a clean report of listening and the archive for any period — totals, minutes per day, the most listened programs and where listeners are, by their device's clock rather than any address. Print it or save it as a PDF.

Settings

Staff can switch transcripts and summaries on or off for listeners at once, and edit what listeners see of the station — name, logo, side-menu links and social accounts — with a review step and undo.

PRINTABLE REPORT — LIGHT (EXAMPLE FIGURES)

FOR KPFK AND PACIFICA

Built around the station's rules

The station decides what is shown

Every program on KPFK's published schedule, plus its podcasts. Programs that leave the schedule leave the archive; music programs stay for 14 days; a program the station has no on-demand rights to can be held back entirely.

No extra work for the station

The website reads Pacifica's own archive feeds. When a program airs and is archived, it appears on its own; failed recordings are hidden and wrong running times corrected automatically.

Privacy first

No accounts, sign-ins, cookies for tracking, or ads. The station counts plays, listening time and page views — with no identifier of any kind, and never the words people search for. The website's public README says so.

Rights and corrections

A program the station has no on-demand rights to is held back everywhere — website, search, transcripts and the app. Episodes filed under the wrong program in Pacifica's feed are shown under the right one.

Honest about machine transcripts

Titles, summaries and transcripts come from Pacifica's transcript service and are labelled as machine-made ("names and words may be wrong"). The station's own descriptions always take priority.

One archive, the website and the app

The KPFK Podcasts app reads this website's archive, so a fix or a new program here reaches the app too — and every Share in the app opens here.

Where it stands

- **Live** at podcasts.kpfk.org since September 2026.
- **Audited 15 October 2026** in the engines behind Safari and Chrome, on phone, tablet and computer sizes, in light and dark — every main screen and button clicked through; fixes tested on an iPhone and a desktop the same day.
- **Checked automatically** by about two hundred tests, plus browser tests that measure what a listener actually sees.

What's next

- **Links that open the app:** a shared KPFK link opens straight in the app when it is installed, and on the website otherwise.
- **Hold back a program or episode from the studio** — for rights, legal or a bad recording — without a technical change.
- **A picture to share:** a designed image of each episode for Instagram and other image-first platforms.
- **The same website for other Pacifica stations:** everything station-specific is in one settings file, so a sister station's archive can power its own copy.
